

JUNIOR WARDEN REPORT

JAN 30, 2021

Since the last Junior Warden report the following maintenance items have been completed to the parish complex.

- The parish center's stucco trim has been repainted from yellow to ivory.
- Cracks in the stucco have been repaired
- The pool filtration system has been replaced with a maintenance friendly cartridge system.
- Walls have been constructed around the pool equipment.
- The parish house water filtration and water softener system has been replaced. This was necessary because of the high acidity levels in the well water that caused damage to our boiler system.

The entrance committee will report on the work on the grounds entrance.

Larry Perrone

Junior Warden
